

# Costa Coffee Energy Policy Statement

## Costa Coffee Energy Policy Statement

Costa Coffee is a responsible business and we are committed to minimising our impact on the environment and promoting good environmental practice. We aim to achieve continual improvement in our energy efficiency whilst increasing the business's overall sustainability in line with the Global Environment Policy.

We will apply this policy, and the related energy management system, to Costa Coffee's activities within the UK and Ireland business at sites where the company has direct operational control.

### Costa Coffee will:

- Aim to purchase energy at the lowest-possible cost, whilst assuring uninterrupted supply.
- Source 100% of electricity from green energy, unless commercially unfeasible.
- Aspire to be early adopters in new technologies, engineering systems and practices within the energy supply industry and review regularly to improve energy efficiency.
- Measure and monitor our energy-use and greenhouse-gas impact, and report as appropriate.
- Set achievable targets and objectives to reduce overall energy consumption.
- Use energy in the most efficient and environmentally responsible way, wherever possible.
- Consider energy consumption during design and commissioning of all new buildings and refurbishment projects.
- Promote energy awareness throughout the business using staff training and engagement activities.
- Establish a culture where all interested parties are encouraged to participate in energy management.
- Provide necessary resources to achieve the company's targets and objectives.
- Review this policy at regular intervals to maintain relevancy.

We aim to achieve the above whilst ensuring we are compliant with all applicable regulations and legislation and will review this policy regularly to ensure continual improvement.

James Hamilton  
Property & New Store Development Director – Costa
